

Betaflex Pro FlexoEyePlus Reports Option

The FlexoEyePlus Reports option creates reports suitable for publication and internal use.

The operation is “modal” out of necessity, requiring the prior creation of Materials, Specifications, Target values, etc. Once **MATERIALS** are created and specified in the **MATERIAL REFERENCE** section shown here, they become available for selection on drop down lists in the Laser Check and Plate Check reports shown below.

MATERIAL properties are created, edited, opened, and deleted by the control buttons shown at the bottom of the panel.

Reports are rich in content, containing halftone data, images, and gauge measurements. Tolerances may be included on reports for internal use, or omitted on versions for publication or marketing.

Data from the reports can be exported directly into Excel or saved as text files.
